

Homework 01

Website Design

Due Dates: 09/21/2020 at 11:55 PM (Sharp!)

Preview: This is your chance to build an official website for a startup company that you wish to initiate after graduation. It is a good idea to map out the layout and navigation of your site before you begin designing, look at other websites and see what you like/dislike about them. Having a clear idea of what you want from the start will ease the working process.

Site Requirements:

- You will need to use the following programming/scripting languages: HTML, CSS, Javascript.
- Each page should have a navigation section (i.e., links to all the pages on the website).
- The website should be functional – all links should work, images show up, etc.
- The website should be attractive, easy to navigate, pages should fit together, colors shouldn't clash, etc.
- *If selected, you will present your site to the rest of the class. This is also part of the grade.*
- Your website pages should include but are not limited to:
 - **Homepage:** This page will include a brief introduction about the company, links to the other pages, pictures, etc.
 - **About us page:** This page tells about your company's profile in the market.
 - **Pictures page:** This page should include an organized set of APPROPRIATE pictures.
 - **Products and Services page:** This page should include an outline of what are the products and/or services which your company specialized in.
 - **Contact us:** You need to create a page for your customer to contact you.

Handing in your assignment: Upload your entire project/folder to eCourse in a **zip file**. Please include a readme file will have: (1) your name and student ID; and (2) detailed instructions on how to install/run the website.

Evaluation: It will be based on:

- Overall design and composition of the website and proficiency in software; and
- Overall navigation of the website (all links functioning, interface organized in a logical manner).
